1 Distributed systems - programming and management: On remote procedure call   ◼
Patrícia Gomes Soares
November 1992 **Proceedings of the 1992 conference of the Centre for Advanced Studies on Collaborative research - Volume 2**
Publisher: IBM Press
Full text available: 🗎 pdf(4.52 MB)   Additional Information: full citation, abstract, references, citings

The Remote Procedure Call (RPC) paradigm is reviewed. The concept is described, along with the backbone structure of the mechanisms that support it. An overview of works in supporting these mechanisms is discussed. Extensions to the paradigm that have been proposed to enlarge its suitability, are studied. The main contributions of this paper are a standard view and classification of RPC mechanisms according to different perspectives, and a snapshot of the paradigm in use today and of goals for t ...

2 Lightweight remote procedure call   ◼
◆ Brian N. Bershad, Thomas E. Anderson, Edward D. Lazowska, Henry M. Levy
February 1990 **ACM Transactions on Computer Systems (TOCS)**, Volume 8 Issue 1
Publisher: ACM Press
Full text available: 🗎 pdf(1.60 MB)   Additional Information: full citation, abstract, references, citings, index terms, review

Lightweight Remote Procedure Call (LRPC) is a communication facility designed and optimized for communication between protection domains on the same machine. In contemporary small-kernel operating systems, existing RPC systems incur an unnecessarily high cost when used for the type of communication that predominates— between protection domains on the same machine. This cost leads system designers to coalesce weakly related subsystems into the same protection domain, trading safety for ...

3 Delegating remote operation execution in a mobile computing environment   ◼
Dietmar A. Kottmann, Ralph Wittmann, Markus Posur
December 1996 **Mobile Networks and Applications**, Volume 1 Issue 4
Publisher: Kluwer Academic Publishers
Full text available: 🗎 pdf(333.06 KB)   Additional Information: full citation, abstract, references, citings, index terms

Remote operation execution is nowadays the most popular paradigm used to build distributed systems and applications. This success originates in the simplicity exhibited by

1　Distributed systems - programming and management: On remote procedure call　■
Patrícia Gomes Soares
November 1992 **Proceedings of the 1992 conference of the Centre for Advanced Studies on Collaborative research - Volume 2**
Publisher: IBM Press
Full text available: 📄 pdf(4.52 MB)　Additional Information: full citation, abstract, references, citings

> The Remote Procedure Call (RPC) paradigm is reviewed. The concept is described, along with the backbone structure of the mechanisms that support it. An overview of works in supporting these mechanisms is discussed. Extensions to the paradigm that have been proposed to enlarge its suitability, are studied. The main contributions of this paper are a standard view and classification of RPC mechanisms according to different perspectives, and a snapshot of the paradigm in use today and of goals for t ...

2　Fast detection of communication patterns in distributed executions　■

↑ ABSTRACT

A new technique for computer-to-computer communication is presented that can increase the performance of distributed systems. This technique, called remote evaluation, lets one computer send another computer a request in the form of a program. A computer that receives such a request executes the program in the request and returns the results to the sending computer. Remote evaluation provides a new degree of flexibility in the design of distributed systems. In present distributed systems that use remote procedure calls, server computers are designed to offer a fixed set of services. In a system that uses remote evaluation, server computers are more properly viewed as programmable processors. One consequence of this flexibility is that remote evaluation can reduce the amount of communication that is required to accomplish a given task. In this paper we discuss the semantics of remote evaluation and its effect on distributed system design. We also summarize our experience with a prototype implementation.

↑ REVIEW

"Robert Bruce McLaughlin"

The new concept of distributed processing presented by Stamos and Gifford takes the idea of a remote procedure call (RPC) one step further. A remote evaluator (REV) is a remote server that is sent a program, executes the program, and returns the results to the client. A REV program is

allowed to contain invocations of programs to run on other servers. The authors are convinced that this approach will reduce network traffic compared to the conventional RPC. The authors give examples of REV programs, which illustrate the concept. The final section presents results of a simple test of the idea. The authors' recommendation is a variation of a concept that has been in use since the early days of telecomputing. They briefly discuss similar concepts, such as SunDew, CLAM, NCL, and Inter-Lisp-D, and compare them to their proposal. The authors leave the solution of several difficult problems—security, limiting resources consumed by the REV program, and deadlock control—to implementers. The paper does not address questions of resource control and allocation over the whole server network. The paper is for workers interested in distributed processing over a network. As such, the authors expect the reader to understand the technical details of such processing. The paper contains several network distributed processing references, with no apparent bias or omissions. *Online Computing Reviews Service*

☐   1. **Cosmic-ray test of the installed endcap RPC modules in BELLE detector**
Abe, K.; Azuchi, S.; Hanada, H.; Haitani, F.; Hoshi, Y.; Igarashi, Y.; Inoue, Y.; I
Nagamine, T.; Nakajima, M.; Nakajima, T.; Nakano, E.; Narita, S.; Neichi, K.; S
Takahashi, T.; Takayama, T.; Teramoto, Y.; Ueki, M.; Yamaga, M.; Yamaguch
Nuclear Science, IEEE Transactions on
Volume 46, Issue 6, Dec. 1999 Page(s):2017 - 2021
Digital Object Identifier 10.1109/23.819274

AbstractPlus | Full Text: PDF(416 KB)   **IEEE JNL**
Rights and Permissions

☐   2. **Constructing a configurable group RPC service**
Hiltunen, M.A.; Schlichting, R.D.;
Distributed Computing Systems, 1995., Proceedings of the 15th International (
30 May-2 June 1995 Page(s):288 - 295
Digital Object Identifier 10.1109/ICDCS.1995.500031

AbstractPlus | Full Text: PDF(856 KB)   **IEEE CNF**
Rights and Permissions

☐   3. **Cosmic-ray test of the installed endcap RPC modules in BELLE detector**
Abe, K.; Azuchi, S.; Hanada, H.; Haitani, F.; Hoshi, Y.; Igarashi, Y.; Inoue, Y.; I
Nagamine, T.; Nakajima, M.; Nakajima, T.; Nakano, E.; Narita, S.; Neichi, K.; S
Takahashi, T.; Takayama, T.; Teramoto, Y.; Ueki, M.; Yamaga, M.; Yamaguch
Nuclear Science Symposium, 1998. Conference Record. 1998 IEEE
Volume 1, 8-14 Nov. 1998 Page(s):613 - 617 vol.1
Digital Object Identifier 10.1109/NSSMIC.1998.775215

AbstractPlus | Full Text: PDF(308 KB)   **IEEE CNF**
Rights and Permissions

☐   4. **Detection of muons and K_L^0 mesons from e^+e^- collisions using the endca
in the Belle detector**
Abe, K.; Azuchi, S.; Chinomi, S.; Hanada, H.; Handa, F.; Higuchi, I.; Hoshi, Y.;
Inoue, Y.; Kawamura, N.; Murono, N.; Nagamine, T.; Nakajima, M.; Nakajima,
Narita, S.; Neichi, K.; Sakaue, H.; Takahashi, T.; Takayama, T.; Teramoto, Y.;
Yamaga, M.; Yamaguchi, A.; Yuta, H.;
Nuclear Science Symposium, 1999. Conference Record. 1999 IEEE
Volume 1, 24-30 Oct. 1999 Page(s):240 - 244 vol.1
Digital Object Identifier 10.1109/NSSMIC.1999.842485

AbstractPlus | Full Text: PDF(288 KB)   **IEEE CNF**

RESULT LIST
5 results found in the Worldwide database for:
dynamic module configuration in the title
(Results are sorted by date of upload in database)

1 **Method for the dynamic configuration of an operator interface of a functional module**
Inventor: KOEHLER MAIK (DE); BRUNNER REINHARD (DE); (+3)   Applicant:
EC: G05B19/05P   IPC: *H02H11/00*; H02H11/00

Publication info: **US2006158044** - 2006-07-20

2 **Scalability management module for dynamic node configuration**
Inventor: SCHWARTZ WILLIAM B (US); SODERLUND ADAM L (US); (+4)   Applicant: IBM (US)
EC: IPC: *G06F1/24*; G06F1/24; (IPC1-7): G06F1/24

Publication info: **US2005071625** - 2005-03-31

3 **Dynamic configuration of memory module using presence detect data**
Inventor: DELL TIMOTHY JAY (US); KELLOGG MARK WILLIAM (US)   Applicant:
EC: G11C5/00; G11C7/10M7   IPC: *G11C5/00; G11C7/10*; G11C5/00 (+2)

Publication info: **US2001000822** - 2001-05-03

4 **Dynamic configuration of memory module using modified presence detect data**
Inventor: DELL TIMOTHY JAY (US); KELLOGG MARK WILLIAM (US)   Applicant: IBM (US)
EC: G11C5/00; G11C7/10M7   IPC: *G11C5/00; G11C7/10*; G11C5/00 (+2)

Publication info: **US6173382** - 2001-01-09

5 **Dynamic configuration module for equipment integrated into a printer terminal**
Inventor: ABINADER HABIB; ROCHE DIDIER   Applicant: TIV (FR)
EC: B41J21/16; G06F3/023P   IPC: *B41J21/16; G06F3/023*; B41J21/16 (+4)

Publication info: **FR2542889** - 1984-09-21

Data supplied from the *esp@cenet* database - Worldwide

RESULT LIST
1 result found in the Worldwide database for:
RPC and remote execution in the title
(Results are sorted by date of upload in database)

1   **Method for optimizing remote procedure call (RPC) and program execution method by use of the optimized RPC**

Inventor: INOHARA SHIGEKAZU (JP); FUJIWARA   Applicant:
SHINJI (JP); (+2)
EC: IPC: *G06F15/16; G06F9/06; G06F9/44* (+6)

Publication info: US2005273792 - 2005-12-08

_____

Data supplied from the *esp@cenet* database - Worldwide

RESULT LIST
0 results found in the Worldwide database for:
dynamic module configuration in the title AND **remote memory and client and server** in the title or abstract
(Results are sorted by date of upload in database)

Data supplied from the *esp@cenet* database - Worldwide
